

Challenge Instructions

Description

Our take home challenge evaluates your skills and experience in an environment not dissimilar to the one you'll encounter while working with us. Give it your best shot!

Assignment

You have received a link to the repo hosting our challenge. The Wiki lists everything you need to do, and some bonus features for you to try if you want to show us your expertise.

To work on and submit your challenge, you must:

- Create a user in <https://git.jobsity.com>.
- Open the repository sent to you via mail, and fork it using the button at the top.

- Within your fork, go to Settings/General/"Visibility, project features, permissions" and set the Project visibility to Private.

Visibility, project features, permissions

Collapse

Choose visibility level, enable/disable project features and their permissions, disable email notifications, and show default award emoji.

Project visibility ⓘ

Private ▼

The project is accessible only by members of the project. Access must be granted explicitly to each user.

- Create a new branch for you to upload your work.
- Now you can clone your project and work on it.

When you are done:

- Update the Readme. Let us know how to install and use your Application.
- Create a Merge Request to your own main branch. Merge your work into the main branch.
- Send us the link to your Merge Request.
- Done!

Our evaluators will automatically receive access to your repository and see your Merge Request.

Considerations

- Make sure to add any information about how to deploy the project on the Readme, as well as any important details about the features you did or did not do.
- Include any API key you use for your project, so that our evaluators can easily launch and use your app.
